BASIC-ABSTRACT:

A compsn. for detecting antibodies to HIV-1 and HIV-2 contains a set of recombinant antigens synthesised in E. coli cells transformed using recombinant DNA comprising fragments of one or more of the following HIV genes: env 1, gag 1, pol 1, pol-int 1 and env 2. E. coli beta galactosidase may be used as control antigen.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
